🏏 Python Mini Project – Hand Cricket Game

Aim

To develop a **Hand Cricket game using Python** where the user inputs numbers between **1 and 6** to score runs. The computer selects numbers from a predefined sequence. If the user's number matches the computer's number, the player is declared **out** and the game ends; otherwise, the runs are added to the total score.

Algorithm

1. Start the program.
2. Initialize the variable **score = 0**.
3. Create a predefined list of numbers for the computer.
4. Initialize an index variable to access the computer numbers.
5. Ask the user to **enter a number between 1 and 6**.
6. Check if the entered number is valid (between 1 and 6).
7. Select the computer number from the predefined list using the index.
8. Display the computer's number.
9. Compare the user number and computer number.
10. If both numbers are equal, display **"OUT"** and stop the game.
11. Otherwise, add the user number to the **score**.
12. Display the updated score.
13. Move to the next number in the computer list.

14. Repeat the steps until the player is out.
15. Display the **final score**.
16. Stop the program.

Code

```
print(" 🏏 Hand Cricket Game")
score = 0
comp_numbers = [1,2,3,4,5,6,2,4,1,3,5,6]
i = 0
while True:
    user = int(input("Enter a number (1-6): "))
    if user < 1 or user > 6:
        print("Please enter a number between 1 and 6")
        continue
    comp = comp_numbers[i]
    i = (i + 1) % len(comp_numbers)
    print("Computer number:", comp)
    if user == comp:
        print("You are OUT!")
        break
    else:
        score += user
        print("Current Score:", score)
print("Final Score:", score)
```

OUTPUT

```
Enter a number (1-6): 3
Enter a number (1-6): 4
Enter a number (1-6): 2
```

```
🏏 Hand Cricket Game

Enter a number (1-6): 3
Computer number: 1
Current Score: 3

Enter a number (1-6): 4
Computer number: 2
Current Score: 7

Enter a number (1-6): 2
Computer number: 2
You are OUT!

Final Score: 7
```

Result

Thus, the **Hand Cricket game was successfully implemented using Python**, allowing the user to play by entering numbers between 1 and 6 and calculating the score until the player gets out.
